

Java

```
class Solution {  
    public int minLights(int[] lights) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} lights  
 * @return {number}  
 */  
var minLights = function(lights) {  
  
};
```

TypeScript

```
function minLights(lights: number[]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
int minLights(vector<int>& lights) {  
  
}  
};
```

C#

```
public class Solution {  
    public int MinLights(int[] lights) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun minLights(lights: IntArray): Int {  
  
    }  
}
```

Go

```
func minLights(lights []int) int {  
  
}
```
